Managed services products revealed

Business Technology Partners, a US-based IT consulting and managed services firm, has revealed the nationwide roll-out of two new managed services products – KeepSafe and GuardianAngel, according to BTP.

Both products provide access to clients' critical data, resulting in a worry-free environment for businesses.

BTP's KeepSafe solution replaces management-intensive, error-prone tape back-up with an on-site, disk-based, replication device that can be rapidly deployed.
